**SURGICAL INFORMATION SYSTEMS™**

CONNECTING THE SURGEON'S OFFICE TO YOUR ASC

SIS Link facilitates case coordination, enabling surgeon offices to electronically submit case requests with personalized views into surgical schedules and availability.

SIS Link simplifies case requests and communications

Gone are the days of paper requests, fax machines, and time-wasting phone calls. With the help of SIS Link, surgeon office schedulers may make case requests electronically with a view into the schedule that helps to remove multiple discussions between the office and the ASC. SIS Link makes it easy for ASC schedulers to review and process requests in their queue.

This configurable component of SIS Office™ enables surgeon office staff to:

- Check availability on the surgeon's schedule at the ASC, including available block time.

- Easily submit electronic case requests.

- Electronically attach documents to case requests and booked cases, which then flow into the patient record.

- Track the status of all pending, booked, denied, canceled, and performed cases.

- Review information on previously performed cases with access to document attachments, such as transcribed Op Notes, that reflect the performed procedure and can impact billing.

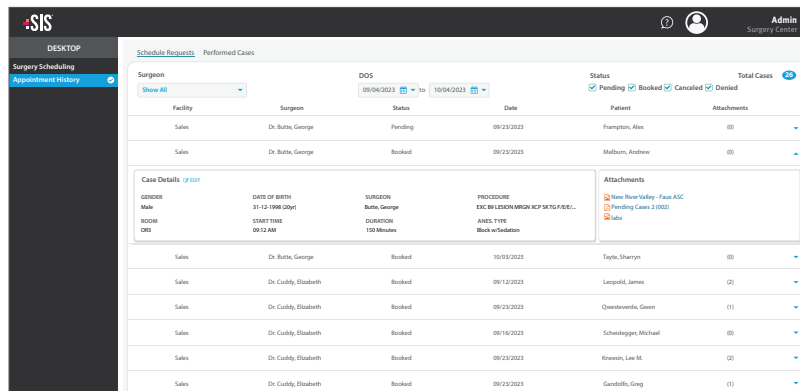

Benefits

SIS Link was designed to bridge the gap between the surgeon's office and your ASC.

- Securely share electronic documents such as H&Ps between the surgeon's office and the ASC.

- The surgeon's office can view the surgeon's schedule at the ASC and electronically request time on the schedule, eliminating guessing games.

- Information entered in the case request feeds directly into SIS Office for review and acceptance, removing double entry or manual workarounds.

- Procedure and diagnosis dictionaries from SIS Office are used in SIS Link, eliminating the need to enter new procedure or diagnosis codes more than once or keep dictionaries in synch.

- SIS Link is designed to make the workflow easier between the surgeon's office and the ASC, thus increasing both staff and patient satisfaction.

SIS | OPERATE SMART™

The easy-to-use module enables ASC schedulers to:

- Configure required fields for case requests made by the surgeon's office.

- Review and respond to surgeon office case requests in a timely manner.

- Electronically track incomplete tasks related to case requests.

SIS Link is included with your purchase of SIS Office, a comprehensive ASC management solution. Intuitive and easy-to-use, SIS Link helps to eliminate communication issues between the surgeon office staff and the ASC staff while making the patient experience easier and more enjoyable.
